

SigNatureCoral

Handcrafting exceptional coral reproductions and aquarium art over 20 years

Product Catalog

All replicas are cast in molds taken from real coral skeletons. The proprietary casting material is safe for fresh and salt water.

Pieces are heavy, will not float and will not be eaten by fish. Large fish can not easily shift the product.

More durable than other materials on the market, these replicas resist damage by fish or medications.

Unlike latex or other overseas resins, the pieces should last a lifetime with proper care.

Color is molded in for lasting beauty. Due to the realistic texture and complexity of our coral, it should be cleaned in the same way as natural coral.

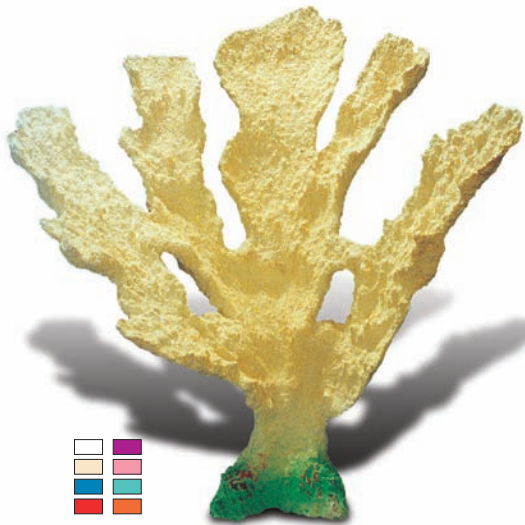

**The largest manufacturer of beautiful, life-like coral.
Sold only to independent Signature dealers.**
